

Used Cooking Oil Collection System

Model 1500C – Caddy Transport System

The 1500C utilizes a caddy to transport the used cooking oil from the fryer to the tank. The tank has a stainless steel outer shell that measures 30” in diameter, has an overall height of 89” and a storage capacity of 1500 lbs / 200 gallons. It is equipped with an energy-saving heater system, dual-level sensor, power loss alarm and much more.

Grease Caddy Features

The standard caddy will hold up to 65 lbs / 9 gallons of used cooking oil. The stainless steel body measures 12” W x 34” L x 9” H. It is equipped with a powerful 1/3 HP motor and a durable pump with hardened gears. The special quick-connectors provide for safe and easy transfer of used cooking oil into the storage tank. Other caddy sizes are available upon request.

Model 1500D – Direct Vacuum Transfer System

The 1500D utilizes a vacuum system to transfer the oil directly from the fryer to the tank. The vacuum system has a stainless steel outer shell that measures 30” in diameter. The overall height of the tank and pump is 92” and has a storage capacity of

1500 lbs / 200 gallons. It is equipped with an energy-saving heater system, dual-level sensor, power loss alarm and many other features. You may also manage your grill grease disposal with the optional grill grease warmer system.

For use with liquid or solid shortening

Model 1500H – Direct Fryer Pump Transfer System

The 1500H uses your fryer’s filter pump system to transfer the used cooking oil directly from the fryer to the tank. A free-flowing electronic ball valve is used to interrupt the oil transfer when the tank is full. The system has a stainless steel outer shell that measures 30” in diameter. The tank has an overall height of 92” and has a storage capacity of 1500 lbs /200 gallons. It is equipped with an energy-saving heater system, dual-level sensor, power loss alarm and many other features.

For use with liquid shortening only

Classified to NSF4

All systems require a
120 volt / 20 amp dedicated circuit
