

## Used Cooking Oil Collection System

### Model 2500CW Caddy Transport System

The 2500CW utilizes a caddy to transport the oil from the fryer to the tank. The tank has a carbon steel double-walled shell (secondary containment) that measures 42" in diameter, an overall height of 88" and a storage capacity of 2500 lbs / 325 gallons. It is equipped with an energy-saving heater system, dual-level sensor, power loss alarm and much more.

**This model is for Interior use only. For special application requests, contact Darling.**

### Grease Caddy Features

The standard caddy will hold up to 65 lbs / 9 gallons of used cooking oil. The stainless steel body measures 12" W x 34" L x 9" H. It is equipped with a powerful 1/3 HP motor and a durable pump with hardened gears.

The specially designed quick-connectors provide for the safe and easy transfer of used cooking oil from the fryer into the storage tank. Other caddy sizes are available upon request.

Model 2500CW is available in Black only. Interior installation.  
All systems require a 120 volt / 20 amp dedicated circuit
