

Used Cooking Oil Collection System

Grill Grease Management System – with Vacuum System

The grill grease warmer system allows you to collect your grill grease throughout the day, warm it overnight, and the next morning simply vacuum it into your 1500D or 2500D vacuum system. The solids are collected in a cloth filter and effortlessly discarded in the trash.

Model 1500D – Direct Vacuum Transfer System

The 1500D utilizes a vacuum system to transfer the used oil directly from the fryer to the tank. This system has a stainless steel outer shell measuring 30” in diameter. The tank and pump have an overall height of 92” and a 1500 lb / 200 gallon storage capacity. It is equipped with an energy-saving heater system, dual-level sensor, power loss alarm and many other features. Grill grease disposal is easily managed with the optional grill grease warmer.

Model 2500D – Direct Vacuum Transfer System

The 2500D utilizes a vacuum system to transfer the used oil directly from the fryer to the tank. This system has a stainless steel outer shell measuring 42” in diameter. The tank and pump have an overall height of 91” and a 2500 lb / 325 gallon storage capacity. It is equipped with an energy-saving heater system, dual-level sensor, power loss alarm and many other features. Grill grease disposal is easily managed with the optional grill grease warmer.

For use with liquid or solid shortening

2500-C, D & H models are available in brown or almond
